

# High Speed Dental 3D Scanning

With North Star Imaging CT Systems and Service

NSI's Computed Tomography X-ray systems are an excellent solution for digital 3D dental scanning. Computed Tomography is unaffected by reflectivity and complex geometry, is entirely nondestructive and is extremely fast.

With Computed Tomography you can:

- ◆ Create a digital model in minutes
- ◆ Create digital model without the use of a plaster casting
- ◆ Obtain both internal and external volumetric information
- ◆ Take extremely accurate measurements
- ◆ Greatly reduce turn around time
